# TEMPTING NEW PANTILE

Marley has launched a groundbreaking new pantile, with a traditional profile but incorporating modern fixing methods for quicker and easier installation. The new Eden tile will transform pantile fitting, giving contractors an easy-to-fix, low pitch option when you need a traditional pantile for aesthetic or planning purposes.

Unlike anything else on the market, the Eden pantile combines a traditional appearance with time saving features previously only seen on Marley's Lincoln interlocking tile. The Eden includes a specially designed SoloFix channel to make BS 5534's two point fixing easier and a flat back on the rear of the tile so it doesn't rock during installation. You can also use it down to a low minimum pitch of just 22.5 degrees.

For more information visit

[www.marley.co.uk/edenpantile](http://www.marley.co.uk/edenpantile)

## Supporting NFRC Skillbuild

**READ OUR FOCUS ON TRAINING, PAGE 8**

The A. Proctor Group is sponsoring the NFRC in supporting SkillBuild, the largest multi-trade competition in the country for trainees and apprentices. Addressing the construction industry skills shortage and the need to attract young people and promote training, SkillBuild is delivered by CITB like a mini Olympics with a series of competitions covering ten crafts: Bricklaying, Cabinet Making,

Carpentry, Dry Walling Systems, Joinery, Painting and Decorating, Plastering, Roofing, Stonemasonry, Wall and Floor Tiling. The National Finals will be held at the NEC on 21st - 23rd November. In support of the competition, the A. Proctor Group is supplying Roofshield, recognised as one of the highest performing pitched roof underlays, which is both air and vapour permeable.

## New and Improved AH+ Liquid Waterproofing

SIG Design & Technology are continually innovating to offer the best products to our customers. With this in mind we have launched the next generation of the popular liquid waterproofing system AH+ with improved levels of robustness and usability.

The new and improved AH+ is a wet-on-wet, cold applied liquid waterproofing product that's fully reinforced with a polyester fabric. An innovative one-component system it offers many benefits including ease of application, fast curing times and with low VOC content it is fume free. It can also be applied in practically any conditions making it ideal for new build or refurbishment projects.

Available in two versions, AH25+ and AH15+ use different weight reinforcement fleece and coverage rates and are available with 25 and 15-year warranties respectively.

For more information visit

[www.sigdandt.co.uk/ah-liquid-waterproofing/](http://www.sigdandt.co.uk/ah-liquid-waterproofing/)

## Green and waterproof

SIG Design & Technology are working with Eco Green Roofs (EGR) to provide guaranteed green and blue roof systems, combining expertise on both the roof system and waterproofing under one package.

A green roof has a core function in the development of the urban landscape and EGR specialise in the supply and installation to ensure the sustainability of their roofs.

Each roof uses a range of plant species suited to its location and the demands on it.

The EGR Blue Roof is designed to reduce the impact of water, typically rainfall, and release this water over a longer period of time, easing the pressure on the drainage system during severe rainfall.

For more information visit

[www.sigdandt.co.uk/green-roofs/](http://www.sigdandt.co.uk/green-roofs/)

## INTRODUCING Redi-Ridge

This universal ventilated dry fix ridge and hip system eliminates the need for intricate ridge union pieces or unsightly mortar joints between ridge tiles, saves you installation time and helps you meet Building Regulations (Approved Document C 2004 and BS5250:2011 + A1:2016).

The design of the aluminium roll in the system provides a clear ventilation path, is wind and rain resistant and overcomes the durability and weathering issues associated with other fabric-based roll ridge systems.

The Redi-Ridge is also compatible with all Red Bank standard ridge tiles, including Capped Angle, Roll Top and Crested.

To give customers the best view of what their chimney pots look like in situ, Yorkshire based independent manufacturer W T Knowles is adding a photo gallery to its website. It complements the substantial technical information already available.

The gallery will show installation photographs of various types of standard pots as well as ornate and Heritage options.

MD, Martin Knowles describes it as "very much a work in progress" and is inviting further contributions from SIG branches and customers to add to it.

Working with SIG Roofing, W T Knowles hold substantial stocks of standard products for immediate delivery, while on-site manufacturing flexibility allows delivery of bespoke chimney pots in 6 to 8 weeks at most.

For further information, telephone 01422 372833 or visit [www.wtknowles.co.uk](http://www.wtknowles.co.uk)

## BRIEFS

### Leeds apprentice success

Matthew Ford and Oscar Miller have been crowned the pitched and flat roofing BMI Apprentices of the Year 2019. The victors each received a trophy and £1,000 cash prize to invest in their future. Both attend Leeds College of Building and Matthew works for housing association, Incommunities, while Oscar is employed by Grimsby-based The Roofing Corporation.

### Temporary works

Eighteen SIG Roofing branches are being refurbished this autumn, however they will **stay open throughout the works**. The new and improved Trade Counters will have lots of customer benefits including a modern environment, new product and innovation introductions, and restructured layout. Check your local branch Facebook page (e.g. SIGRoofingMilford) for details and updates.

**SIG Roofing**  
Interesting to read the outcomes of the Federation of Master Builders' survey into primary concerns for small and medium sized construction businesses. Take a look at the Independent's analysis of the report: <https://bit.ly/2YFKETL>

@SIG RoofingUK  
Our #DartsChallenge and opportunity to win Premier League Darts tickets has been going down a storm. Many thanks to Sandtoft.

@SIG Roofing  
Thanks to everyone who attended recent branch open days and in store demos showcasing our FIX-R EPDM products. <https://bit.ly/2P4Jxjg>

# ONE ROOF, ONE PARTNER, ONE WARRANTY

Offering a product system warranty to your customers can give you an advantage when quoting for jobs. Even better if that warranty is through a single company, keeping the paperwork to a minimum with maximum reassurance.

Enter ONE Warranty from SIG Roofing, a simple way to provide a 15-year warranty in a single package. Tailor made for busy roofing contractors, it's free to register for the scheme, then quick and easy to register your completed projects and receive warranty certificates.

Customers will gain that added peace of mind that your work can be trusted and that any unforeseen issues will be ironed out without further expense. You have the peace of mind that any pitched or flat roofing project can be covered.

Leading pitched roofing manufacturers included:

Leading flat roofing manufacturers included:

## WHOLE BUILD UP

The product range available under the ONE Warranty umbrella covers a variety of well-known roofing brands from batten to roof coverings. These include FIX-R Torch On Felts and EPDM Membranes, SIGA Natural Slate, SIGnature Clay Roof Tiles and SmartPly OSB.

## REGISTER NOW

You will receive a welcome pack and a membership number plus a sample certificate and customer leaflets explaining the scheme. [sigroofing.co.uk/onewarranty](http://sigroofing.co.uk/onewarranty)

## TRADE CLUB GREATS

If you like free stuff, Trade Club is right up your street. Every time you spend at your local SIG Roofing branch, you'll collect points just by presenting your Trade Club membership card. Every month, you can also earn double points on an own label product. We'll send you a monthly voucher to use on anything in branch when you spend £250 + VAT or more. Sign up at: [Sigroofing.co.uk/tradecub](http://Sigroofing.co.uk/tradecub)

# Conti-soaker help

Hambleside Danelaw offers advice on weatherproofing abutment detailing

- Q:** Do I need to use a continuous soaker or secret gutter in combination with your individual tile soakers?
- A:** Yes, if the roof has potential for a high level of water run-off. This could be in high wind and rain exposure conditions, particularly with low roof pitches, a large roof or a multi-storey abutment wall next to the roof.
- Q:** When using your Conti-soakers, should I leave a gap between the tiles and the abutment wall?
- A:** Leaving a small gap of 40mm to 50mm helps drainage and cleaning where there is a risk of leaves, moss or lichen accumulating. Alternatively, use with a step and cover flashing or our individual soakers.

Find out more about abutment detailing FAQs here: [www.hambleside-danelaw.co.uk/pitched-roofing/faqs/roof-abutments/](http://www.hambleside-danelaw.co.uk/pitched-roofing/faqs/roof-abutments/)

# REPAIR YOUR RIDGES

Flexim technical support team explains how to make a quick repair despite impending rain.

Whether your repair is to a ridge cap or hip cap, or adhering a tile/tile pieces to valleys and roof windows, **ready-to-use Flexim roof putty** can ensure you get the job done.

1

Remove all loose material and ensure the substrate is clean and dry. Afterwards, open up **lightweight Flexim strips**.

2

Fill any joints, cracks or holes fully with the putty strips in your chosen colour to create a **speedy watertight seal**. Ensure the bonding area width is at least 5cm.

3

TIP: For ridge, hip and facade tiles, mechanical fixing is advised.

Remove excess putty at angle of 90° to the roof surface and smooth out with a spatula or finishing knife. Flexim remains flexible so it can cope with temperature fluctuations and high wind speeds.

4

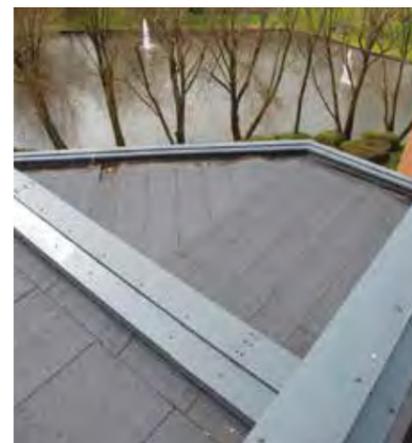

For more information visit [www.flexim.eu](http://www.flexim.eu)

# Complexity simplified

## The challenge

After 27 years the 4,250m<sup>2</sup> flat roof of Unit 800 at Aztec West had reached the end of its useable life. It needed full replacement to provide a good quality waterproof covering and to meet current Building Regulations.

The extremely complex roof design of intersecting octagons also has regular foot traffic for maintenance access.

## The solution

BMI UK & Ireland advised on design to help with the roof's tapered insulation and waterproofing membranes. The solution, installed by Mitie Tilley Roofing, consisted of:

- BMI Icopal Total Torch Vapour Control Layer
- 120mm BMI Thermazone Torch-on Roof Insulation Boards in the majority of areas
- Tapered insulation for the remainder - Total Torch Vapour Dispersion Layer and charcoal Thermaweld FireSmart Mineral Capsheet.

## What we learned

Together these components resulted in a tough, premium roof that withstands weather and foot traffic, with Aztec West recently voted Industry Choice in the UK Roofing Awards 2019.

And, as the roof was installed to BMI's specification by a Team Icopal-approved contractor such as Mitie Tilley Roofing, it also qualified for a comprehensive, insured guarantee cover of up to 20 years.

For more details of BMI UK & Ireland's flat and pitched roofing solutions, visit

[www.bmigroup.com/uk](http://www.bmigroup.com/uk)

# Run-off result

## The challenge

Milestone Farm in Wymondham, Norfolk is a six bedroom, 435m<sup>2</sup> property. A key factor in the design and construction of the property was ensuring longevity and minimising maintenance. The rainwater system also needed sufficient capacity to cope with run off from the large roof during heavy rain.

## The solution

The Evolve Box gutter and Flush-fit 72mm x 72mm downpipe in RAL 7016 Anthracite Grey suited the aesthetic of the property and met the rainwater capacity requirements. With a flow rate of up to 7.0 litres per second and the ability to cope with a 333m<sup>2</sup> roof area per downpipe, the system more than met the demands of the large house. Marley Alutec's technical team also designed and manufactured bespoke angled outlets to overcome a challenging design detail. The marine-grade aluminium system is highly corrosion resistant due to its naturally occurring protective oxide coating. This means it won't need regular maintenance over its expected 50-year lifespan, apart from occasional cleaning.

## What we learned

Being involved in the design and specification of every aspect allowed the owners to create something unique. As such, finding the right products and materials for the build was very important. For the roofline systems the project needed a solution that not only complements the design but is also long lasting and low maintenance. For more information on Marley Alutec's products, please visit [www.marleyalutec.co.uk](http://www.marleyalutec.co.uk).

# MOORLAND SLATES RISE TO THE CHALLENGE

## THE CHALLENGE

A David Wilson Homes development needed a high-quality roof slate to complement a complex roof design and provide a wind-tight and aesthetically pleasing finish.

## THE SOLUTION

As the housebuilder had used Cembrit Moorland slates before, they decided to specify the product range on this housing development in Abergavenny. Main contractor, Avonside Roofing, installed the slates on a design that featured pitches ranging from 35° to 57°, and also consisted of dormer windows, vents, verges, hips, abutments, and valleys.

"Using a combination of single and double-fibre cement slates, we provided a high-quality finish that complements the complex roof design," says Chris Hawkes, Commercial Manager at Avonside Roofing. "We cut the double slates down to a slate and a half at the verges, as well as for the valleys, hips,

loft windows, dormers, and abutments. This process provides wind uplift resistance, which helps in creating a long-lasting roof covering. We also installed Cembrit low profile roof slope vents for adequate ventilation. The Cembrit slates were extremely easy to cut and fix, and we are extremely pleased with the end result."

## WHAT WE LEARNED

Cembrit Moorland fibre cement slates are flexible and accommodating, making them the ideal choice for challenging roofing systems.

# PROOF OF YOUR PROFESSIONALISM

## Insight looks at how training can help you and your employees

Whether you need to upskill in a particular discipline, keep up-to-date with the latest standards and best practice or demonstrate your expertise, training and certification can help to build your business.

Proving your knowledge and competence is increasingly important in construction, whether you are pitching for a tender or a small private job. Not only can training update and upskill you, it can reduce waste, accidents and lead to repeat contracts, all of which affect your bottom line.

### What types of training are there?

- **Modern Apprenticeship Scheme / Specialist Apprenticeship Programme (SAP)** - for people new to the industry with little/some experience; various programmes and qualifications.
- **On-site assessment and training (OSAT)** - enables experienced, but not formally qualified, roofers to prove they are competent, safe and qualified to work on construction sites.
- **The Specialist Upskilling Programme (SUP)** - for roofing workers with basic site experience. Course attendance and/or on-site training leads to N/SVQ level 2 and qualification for a blue CSCS card.
- **Experienced Worker Practical Assessed Route (EWPAP)** - an alternative to existing assessment methods for experienced workers with a minimum of five years' experience.
- **National and Scottish Vocational Qualifications (N/SVQ)** - five levels of work-based qualifications designed to prove that the standard of work required has been met.
- **Basic Competency Programme (BCP)** - formalised manufacturer training programme in all roofing disciplines.
- **Manufacturer training** - available direct from the manufacturer or through SIG Roofing branches on a large range of products e.g Marley, Russell Roof Tiles, Klobber.

### Who provides the training?

There are 13 Roof Training Groups in the UK who are members of the Roofing Industry Alliance, along with all the major roofing trade associations such as CORC, NFRC and SPRA. Numerous colleges also offer training on specific skills. Both are listed in the Roofing Training Prospectus at [roofindustryalliance.co.uk](http://roofindustryalliance.co.uk).

The Construction Industry Training Board (CITB) offers a range of roofing-specific and general construction courses e.g. Building regulations and standards. Grants are available for members.

### RoofCERT

This is a national accreditation scheme, currently being piloted, providing individual roofers with visible proof of their essential roofing skills. Managed by the NFRC, it comprises seven short courses. Visit [roofcert.co.uk](http://roofcert.co.uk) for more information.

### CSCS Cards

CSCS (Construction Skills Certification Scheme) Cards provide proof that you or your employees have the appropriate training and qualifications for the job you are doing on site. Most principal contractors and major house builders require workers to hold a valid card. Read more at [citb.co.uk](http://citb.co.uk).

### Accredited Contractor

SIG Design and Technology trains expert contractors in the use of specialised products, systems and guarantees. The high-performance products are available through SIG Roofing branches exclusively to roofers who are members of their DATAc accredited contractor scheme. The training, evaluation and support is ongoing. [sigdandt.co.uk](http://sigdandt.co.uk)

Scott says...

Scott Bishop, of Bishops Roofing Services in Reading, undertook the 1-day FIX-R EPDM training course in March.

"I do quite a lot of flat roofs and customers were asking more and more often about EPDM. They like the fact that it's seamless and has a modern, clean cut look with the UPVC trim. It also has a longer guarantee, which is a good selling point.

"Fitting rubber looks easy, so contractors think they can have a go but there's more to it than you might think, such as understanding the different adhesives. If you do it wrong, it can leak. I like to do a proper job, so decided to do the FIX-R training course.

"The training gave me confidence to use EPDM and I've refurbished a 4m x 4m flat roof recently, replacing old felt. The more I use it the quicker I'll get so it'll be quicker than felt."

Chris says...

Chris Stayward of Roofing Cornwall is a DATAc member operating throughout Cornwall and further afield. He and several of his team have learned how to install IKO Armourplan PVC and/or AH25 Liquid Waterproofing through training from SIG Design & Technology.

He says: "It was the warranty and support that you receive from SIG Design & Technology that persuaded me to do the training and apply for DATAc membership. We've been using IKO Armourplan and AH25 for about a year now and have done probably 50 jobs in that time, from small porches and balconies to commercial buildings of 100m<sup>2</sup> or more.

"The training is very good and the support afterwards is a great service. You are shown how to do things better or quicker while on the job and it helps reinforce customer trust as they can see the work is inspected and checked. It's all followed up efficiently with the warranty paperwork.

"We've certainly won jobs on the basis of being able to offer the warranties."

# Help at Hand for Multiple Material Roof Jobs

Nailing it

## Technical expertise

Every job is different and today's roofing contractor can't be expected to know every technical answer. SIG Design & Technology provide a range of assistance specific to each job, including:

- U-Value calculations and condensation risk analysis to prevent condensation problems as manufacturers each have their own figures.
- Wind uplift calculations.
- Tailor-made Cut to Falls Insulation schemes through a full survey to avoid ponding water. (For refurbishment projects, they attend on site).

As a business, SIG Design & Technology only supply fully tested membranes to make sure that adhered membranes (the most common method) are reliable. And, by working through them, they can give you and your client/architect a single warranty to cover the whole system from SIG plc.

What's more, their support won't cost you a penny. SIG Design & Technology's know-how on roofing materials, from membranes and hot and cold applied liquids, to green and blue roofs, metal roofing and cladding and pitched roofing materials such as tiles and natural slate and stone, is free to their customers.

Call our Technical Team on  
**0844 443 4778**

Help  
Support  
Advice  
Question  
Assistance

[www.singleply.co.uk](http://www.singleply.co.uk)

Designing and installing roofing using multiple materials is a great business opportunity but it can be risky for roofing contractors.

Complex roof structures that combine tiles, slate or metals on pitched roofs, and use membranes or liquids for flat areas can save money and work very well, particularly where roofs are hidden from view. But, things can go wrong.

### What could happen?

Problems can arise on the roof where different materials join together, either because of the way they are designed, installed or guaranteed. If something goes wrong, your customer suffers, as does your insurance and your reputation. Call backs are the last thing you want.

As manufacturers only normally make specific ranges of products/systems, their support can be very limited in helping you mix and match systems which can do the job better. SIG Design & Technology on the other hand, works with a wide range of products and systems from various manufacturers, and can offer you much more assistance. By taking responsibility for the interface design, SIG Design & Technology enable architects to fulfil their roof design in the way they want it to look and work, and help contractors complete the work successfully.
